

OD Newsletter – Fall 2025

Our New In-Office Surgery Suite is Now Open

Azure Eye Center is proud to announce the launch of our state-of-the-art, in-office surgery suite, designed to give patients access to advanced surgical care in a setting that is more comfortable, efficient, and cost-effective than ever before.

 5203 Heritage Avenue, **Colleyville**, TX 76034

This new office-based surgical (OBS) suite allows us to perform a wide range of procedures, including:

- **Cataract surgery** with premium IOL options
- **Lens replacement surgery (RLE)** for patients seeking clear vision at all distances
- **Minimally invasive glaucoma surgery (MIGS)** to help reduce eye pressure and dependence on drops
- **Implantable Collamer Lens (ICL) procedures** for patients who are not LASIK candidates

Unlike traditional hospital or ASC experiences, our in-office suite is designed to **minimize barriers to care** and provide a more streamlined surgical journey. Patients benefit from:

- **No IVs** – lighter anesthesia methods create a less intimidating process while maintaining safety
- **No fasting** – patients can arrive more relaxed, without major disruptions to their routine
- **Less waiting** – shorter scheduling lead times and a smoother day-of-surgery experience
- **Reduced costs** – OBS procedures are significantly less expensive than hospital or ASC options, without compromising quality or safety

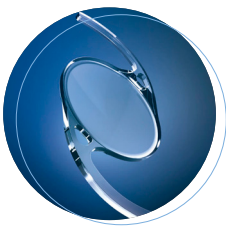

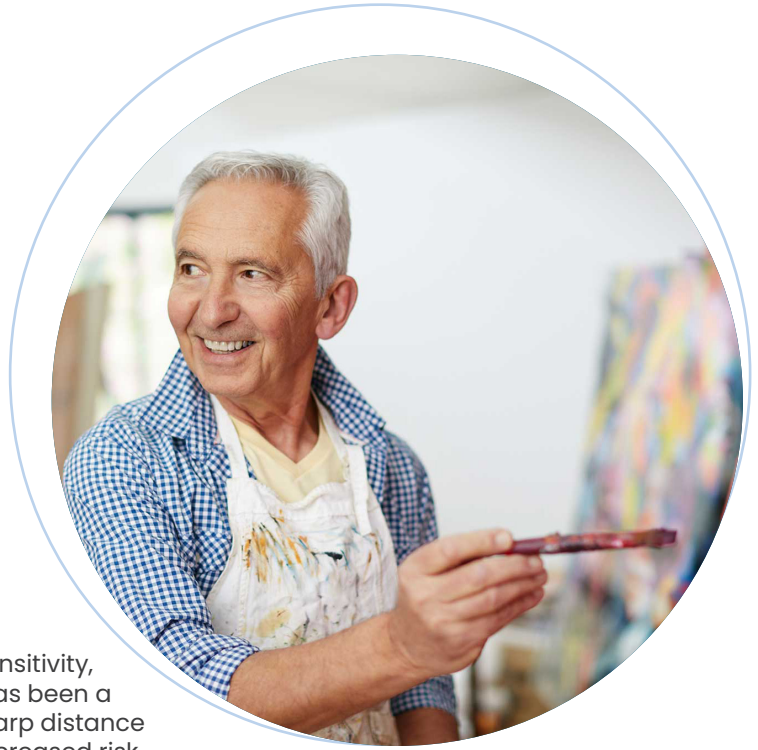

For select patients and certain procedures, we will continue to offer surgery at our trusted partner ambulatory surgery center. However, for the majority of cases, the OBS suite is an excellent alternative that elevates the patient experience while maintaining the highest standards of surgical care.

Technology Spotlight:

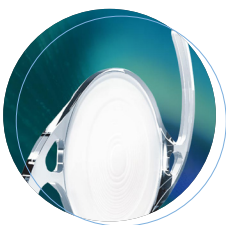

Expanding Premium Lens Options

As part of our commitment to offering patients the best visual outcomes possible, we have continued to expand the premium intraocular lens (IOL) options available at Azure Eye Center. Over the past year, we've seen outstanding results with several advanced lenses, which have quickly become patient favorites:

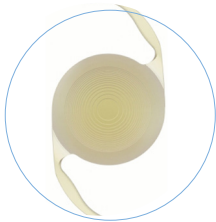

Bausch + Lomb Aspire™ IOL

Known for excellent clarity, contrast sensitivity, and predictable outcomes, this lens has been a reliable choice for patients seeking sharp distance and intermediate vision without the increased risk for halos associated with multifocal lenses.

Bausch + Lomb enVista Envy™ Trifocal IOL

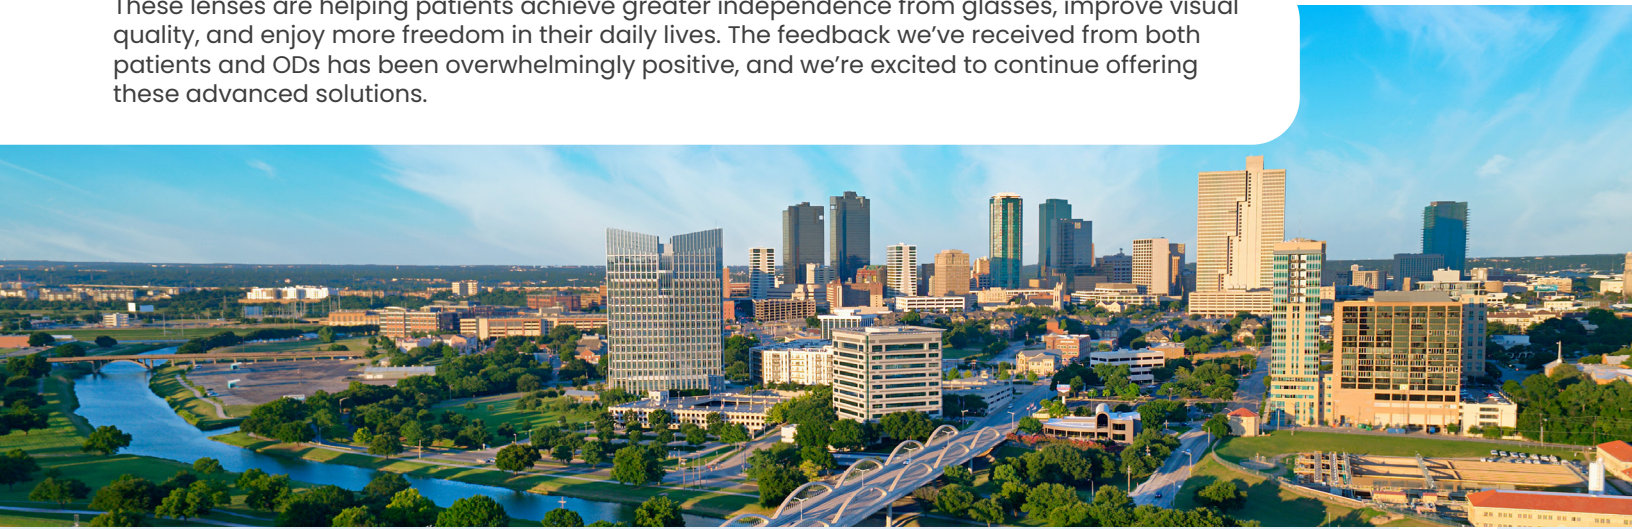

One of the latest additions to the premium trifocal category, this lens provides a continuous range of vision at near, intermediate, and far distances. Patients have been particularly pleased with their ability to see clearly for everyday tasks like reading, computer work, and driving at night.

Alcon PanOptix® Pro Trifocal IOL

Building on the success of the PanOptix platform, the Pro version delivers crisp, full-range vision and has quickly become one of our most-requested lens options.

These lenses are helping patients achieve greater independence from glasses, improve visual quality, and enjoy more freedom in their daily lives. The feedback we've received from both patients and ODs has been overwhelmingly positive, and we're excited to continue offering these advanced solutions.

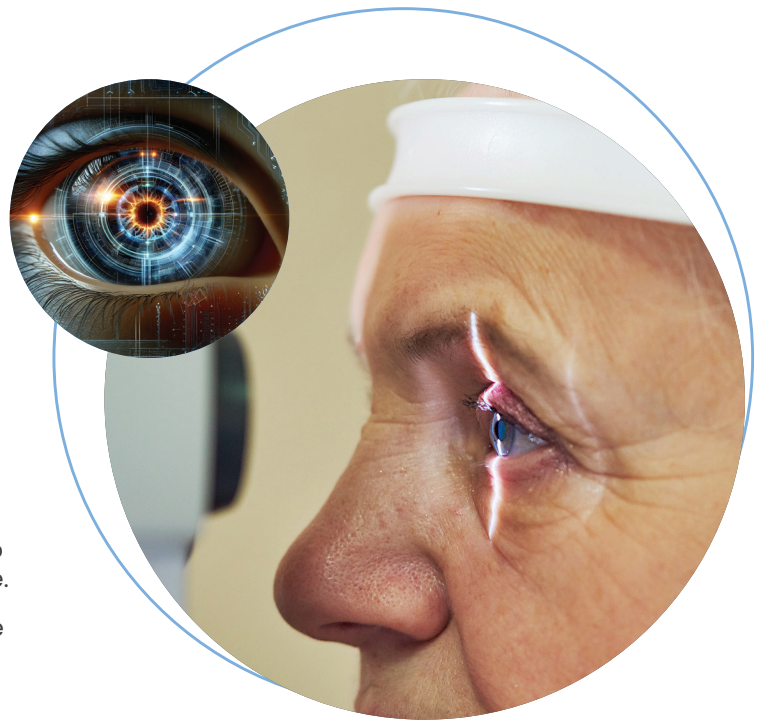

Partnering with ODs:

What This Means for Your Patients

Our new in-office surgery suite and growing portfolio of premium IOLs mean more opportunities to deliver the outcomes your patients are looking for. Whether it's reducing their dependence on glasses, managing glaucoma with minimally invasive techniques, or providing alternatives to LASIK through ICLs, we're here to support you in offering comprehensive, modern eye care.

By referring to Azure Eye Center, your patients will receive advanced surgical options in a convenient setting, while you remain closely involved in their long-term care and follow-up.

A Message from Dr. Truong

"At Azure Eye Center, our mission has always been to combine cutting-edge technology with an exceptional patient experience. The addition of our in-office surgery suite represents the next step in achieving that goal. By eliminating many of the inconveniences patients associate with surgery—such as fasting, IVs, and long hospital wait times—we are making vision correction more accessible and less intimidating.

Pairing this with the latest advancements in premium IOLs ensures we can continue delivering outcomes that truly change lives. We deeply value our partnerships with referring optometrists and look forward to working together to bring these benefits to your patients."

— David T. Truong, MD

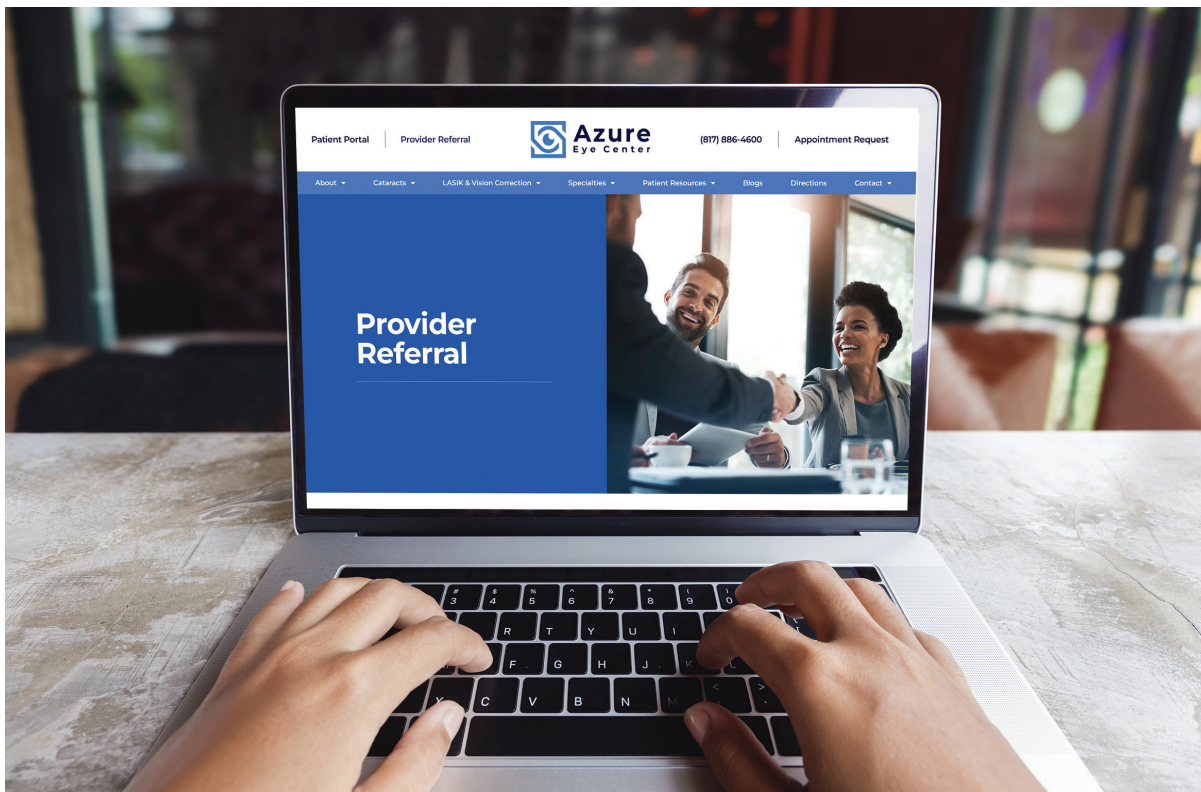

We've Made It Simple!

Use Our Online OD Portal

Azure Eye Center has made referring patients easier than ever. You can now visit our OD Portal and simply complete the form. Once received, we will contact the patient and schedule their appointment.
